| | |
|-----------|---|
| Pineapple | An attractive ornamental w/a large, white to pink spring flower. Its leaves are dark green with whitish undersides. Skin is golden yellow & smooth. Fruit has a slightly pineapple taste. |
| Rich's | Extremely large fruit with lemon-yellow skin. Fruit is fragrant and covered with downy hairs. |

NUT TREES

| | |
|-------------------|--|
| Jefferson Filbert | Leading hazelnut in the market. Flavorful nut that fills the shell well. |
| York Filbert | Delicious for eating or making paste |
| Carpathian Walnut | English high quality nut. |
| Cascade Walnut | Thin shell, excellent flavor. Plump light colored kernels |

A Note on Pollination:

Unless classified "self-fertile", fruit trees require a pollinator (a tree of the same fruit, but different variety) in order to produce fruit. Self-fertile trees do not require a pollinator to produce fruit, however, even self-fertile trees may be more productive with another variety.

Pollen Sterile:

This means that the pollen is sterile and will not pollinate another variety of the same fruit. In this case, other trees will pollinate this variety. For example; a Gravenstein will not pollinate another apple, however, another apple will pollinate a Gravenstein. You would have to then get a third tree to pollinate the other tree that is pollenating the Gravenstein.
